

Town of Andover LOCAL HAZARD MITIGATION PLAN UPDATE

If You Live in Andover We Need Your Thoughts

Andover is updating its Local Hazard Mitigation Plan to improve our resiliency to climate change. This Plan is intended to assist the Town in reducing the impact of natural hazard events to our public infrastructure, private properties, and quality of life.

The Town recognizes that our community feels the impact of climate change differently and would like to know how it has affected you. This survey will be used to help identify the most impactful hazards to our residents and develop an action plan to reduce future risk and losses to our community.

There have been 7 FEMA disaster declarations for Windsor County over the past 10 years, more than in any prior 10-year period, and have been costly to recover from. This planning effort will enable the Town to pursue funding for hazard mitigation projects and increase the level of FEMA assistance provided for recovery from future declared events.

This survey will take 5-10 minutes to complete. Please click the link below.
